eya.chiba@enstab.ucar.tn
Monastir, Tunisia

Profile

Advanced technologies engineering student, with a background in industrial engineering and a specialization in AI and data engineering. Able to design machine learning models and orchestrate agentic AI workflows to solve real-world problems. Combining technical skills in intelligent automation and applied AI with creativity to contribute to high-impact enterprise solutions.

Education

National School of Sciences and Advanced Technologies of Borj Cédria (ENSTAB) **2024 - Present**
Engineering Degree in Advanced Technologies - Industrial Systems and Competitiveness

Preparatory Institute for Engineering Studies of Monastir (IPEIM) **2024**
Preparatory classes, Chemistry / Physics track

Professional Experience

AI and Data Engineering Intern - Sofrecom Tunisia *July 2026 - August 2026*
Internal platform for business data analysis and scoring | Python, LLM, HTML, CSS, JavaScript

- *Analysis of the **Business Management** team's needs and design of an internal web platform to clean, analyze, and score business data*
- *Integration of **LLM**-based analysis and automated data processing to generate summaries and support decision-making*

IT and Network Observation Internship - Tunisie Telecom *June 2025 - July 2025*

- *Analysis of large-scale telecommunications infrastructure and data flows.*
  Development of cross-functional communication skills and IT project management in an enterprise environment.

Projects

***Agentic AI Recruitment System – Automated CV Analysis**, Synthesis Project 2* *Jan 2026 - May 2026*

- ***Description:***
  Design of an autonomous agentic workflow to process, evaluate, and rank CVs against job descriptions.
  Automation of unstructured data extraction through semantic analysis, reducing HR screening time.
  Development of a modular pipeline integrating AI agents for parsing, matching, and scoring.
- ***Technologies:** Python, LLMs, n8n, NLP, data pipelines*

***Edge AI System – Embedded Intelligence**, Internal project* *March 2026*

- ***Description:***
  Deployment of a lightweight machine learning model on embedded hardware for real-time sensor data classification.
  Management of hardware constraints: memory, latency, and power consumption.
- ***Technologies:** Python, TensorFlow Lite, data pipelines*

***Medical AI Platform – Pulmonary Disease Detection**, Synthesis Project 1* *Jan 2025 - May 2025*

- ***Description:***
  Development of a convolutional neural network (CNN) to classify medical images.
  Model optimization and improved interpretability to support clinical decision-making.
  Creation of a Streamlit web interface for real-time predictions.
- ***Technologies:** PyTorch, Deep Learning, Streamlit*

Skills

***Programming languages:** Python, SQL, Java, JavaScript, HTML/CSS*
***Software:** MATLAB, Catia, TIA Portal*
***AI and Machine Learning:** LLMs, Agentic AI, Deep Learning (CNN), NLP, PyTorch, Scikit-learn*
***Data and automation:** n8n, Pandas, NumPy, data cleaning*
***Tools and deployment:** Git, Docker, Streamlit, TensorFlow Lite*
***Process management:** Six Sigma, supply chain, QMS, operations management, process analysis and optimization*
***Languages:** French (fluent), English (professional), Arabic (native)*

Extracurricular Activities

- *Active member of university clubs (IEEE, ACM)*
- *Participation in AI hackathons and competitions*
